

Numeracy Homework

Due date: _____

At St. Peter's we are committed to developing children's core mathematical skills and concepts. This includes their multiplication and division facts as they move through school. This pack is designed to help children develop their multiplication knowledge up to 12×12 . In addition to learning these times tables, children will need to be able to use known facts to derive the answers for other calculations. An example of this is inside the booklet.

Children should complete at least two grids per week and have their time noted above the grid. When children have completed the grids in one step, they may be ready to move on to the next step.

As well as completing the grids, it would help children to master their times tables if you discuss their learning with them. This can be achieved by using the following examples of Chatterbox style questions:

'What are 3 lots of 2?'

'Count up to 20 in jumps of 2'

'Share equally 16 sweets between 2 children.'

'Here is a fact '5 lots of 2 = 10'. Tell me two division facts for this fact.'

It is important to encourage children to use the correct vocabulary when discussing maths concepts as this will help them master each times table. Please remember to cover a completed grid before children start on the next one!

In addition to learning these times tables, children can start counting in steps of the other numbers to introduce other facts. In school we are introducing these using a rolling numbers programme, where children learn to count in steps using their fingers. These can be done in the car, walking to school or almost anywhere to support learning. Examples of these have been included in each step of the booklet.

If you have any questions regarding this homework, or would like extra grids for different steps, please speak to your child's class teacher.

Numeracy Homework

Stage 6.2

Deriving answers using known facts:

This relates to how we can use multiplication facts to derive answers for larger calculations. For example, if we were trying to calculate the answer to $0.3 \times 4 =$ we could use the fact $3 \times 4 = 12$ so $0.3 \times 4 = 1.2$. This is because 0.3 is 10x smaller than 3 so the final answer is 10x smaller than the fact we are using.

If $8 \times 6 = 48$ we can use this to calculate a range of other facts:

$80 \times 6 = 480$ - because 80 is 10x bigger than 8 the answer is 10x bigger, so it is 480.

$8 \times 60 = 480$ - because 60 is 10x bigger than 6 the answer is x time bigger, so it is 480.

$80 \times 60 = 4800$ - because both 80 and 60 are x10 bigger than the original fact, the answer needs to be 100x bigger, so it is 4800.

$480 \div 6 = 80$ - because 480 is 10x bigger than 48 the answer will be 10x bigger, so it is 80.

$0.8 \times 6 = 4.8$ - because 0.8 is 10x smaller than 8 the answer is 10x smaller, so it is 4.8.

$8 \times 0.6 = 4.8$ - because 0.6 is x10 smaller than 6 the answer is 10x smaller, so it is 4.8

$0.08 \times 6 = 0.48$ - because 0.08 is 100x smaller than 8 the answer it 100x smaller, so it is 0.48.

$0.8 \times 0.6 = 0.48$ - because 0.8 and 0.6 are both 10x smaller, the answer needs to be 100x smaller than the fact answer, so it is 0.48.
